1.2.6 Involuppi dei diagrammi delle sollecitazioni: Momento Flettente X-Y.

I dati seguenti riportano i valori del Momento Flettente X-Y relativamente alle aste che definiscono la struttura ed in modo particolare:

Asta : numerazione interna dell'asta.
X : distanza dal nodo iniziale misurata lungo l'asse dell'asta.
Momento Flettente (M_{xy}) : valore del Momento Flettente X-Y nel punto considerato:
Max : valore massimo (rispetto al sistema di riferimento globale) dell'involuppo.
Min : valore minimo (rispetto al sistema di riferimento globale) dell'involuppo.
Comb : combinazione di appartenenza del valore considerato nell'involuppo.

1.2.7 Involuppi dei diagrammi delle sollecitazioni: Taglio X-Y.

I dati seguenti riportano i valori del Taglio X-Y relativamente alle aste che definiscono la struttura ed in modo particolare:

Asta : numerazione interna dell'asta.
X : distanza dal nodo iniziale misurata lungo l'asse dell'asta.

Taglio (T_{xy}) : valore del Taglio X-Y nel punto considerato:
 Max : valore massimo (rispetto al sistema di riferimento globale) dell'involuppo.
 Min : valore minimo (rispetto al sistema di riferimento globale) dell'involuppo.
 Comb : combinazione di appartenenza del valore considerato nell'involuppo.

1.3 Tensioni sul Terreno.

I dati seguenti riportano i valori delle tensioni esercitate dalla fondazione sul terreno.

Asta/Piastra : numerazione interna dell'asta/piastra.

X : distanza dal nodo iniziale misurata lungo l'asse dell'asta/piastra.

Comb : combinazione di appartenenza del valore considerato nell'involuppo.

Tensioni (σ_T) : valore della tensione dovuta alla pressione dell'asta/piastra di fondazione:

1.6 Verifica Stati Limite di Danno.

Per edifici con il seguente tipo di elementi: tamponamenti progettati in modo da non subire danni a seguito di spostamenti di interpiano d_r , il controllo viene fatto tramite la seguente relazione:

$$d_r < 0.0075 h \leq 0.01 h$$

dove:

d_r : spostamento relativo tra due impalcati consecutivi;

h : altezza dell'impalcato;

Piano : piano considerato;

ELEMENTO : tipo e numero dell'elemento considerato;

d_{rx} : traslazione relativa X globale del piano considerato;

d_{ry} : traslazione relativa Y globale del piano considerato;

H : altezza del piano considerato;

d_{lim} : spostamento limite da normativa;

Esito : esito della verifica;

dove:

d_r è lo spostamento relativo tra due impalcati consecutivi;

h è l'altezza dell'impalcato;

Piano : piano considerato;

ELEMENTO : tipo e numero dell'elemento considerato;

drx : traslazione relativa X globale del piano considerato;

dry : traslazione relativa Y globale del piano considerato;

H : altezza del piano considerato;

dlim : spostamento limite da normativa;
